- Introduction
- UserForm 2: Main Menu
- UserForm 4: Inventory Entry
- UserForm 1: Login
- UserForm 3: Customer Entry
- Thank You

INTRODUCTION

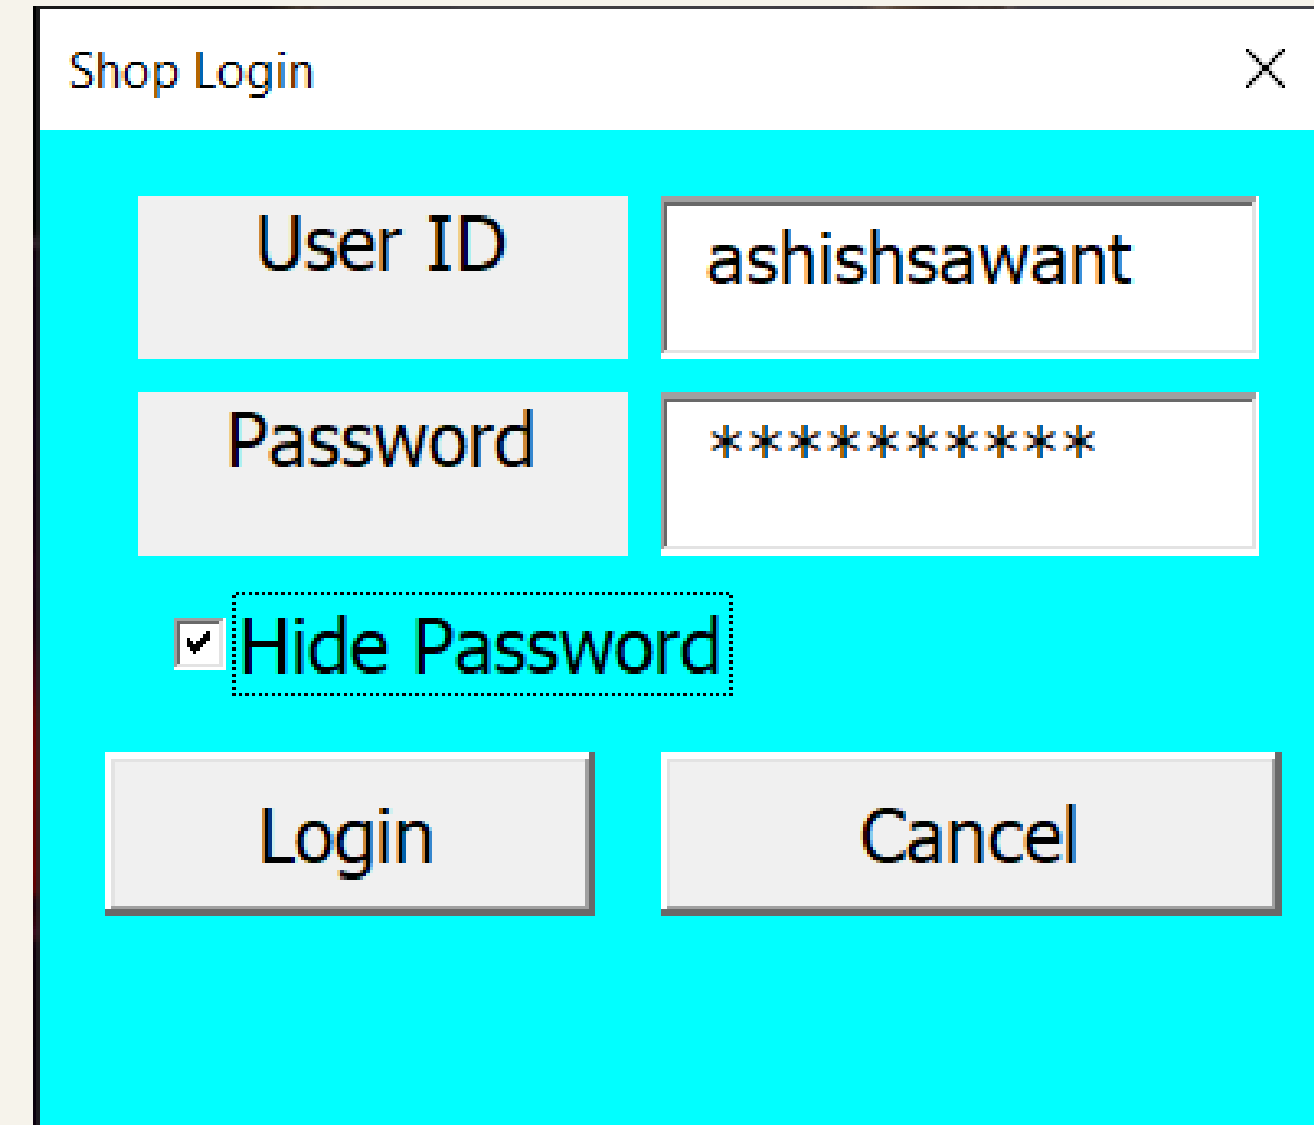

Greetings,

- Today, I'm excited to introduce our new project, a comprehensive Excel VBA application designed to streamline and enhance data management processes.
- This project leverages the power of Visual Basic for Applications (VBA) to create intuitive user interfaces, automate calculations, and facilitate seamless integration with external systems.
- Let's delve into the key components of this project:

USERFORM 1: LOGIN

- UserForm 1 serves as the gateway to accessing the Excel files and initiating the application.
- It features fields for entering login credentials, ensuring secure access to sensitive data.
- By providing a seamless login experience, users can effortlessly connect to the system and unlock its full potential.

The screenshot shows a VBA UserForm titled "Shop Login". It features a light blue background. At the top, there is a title bar with the text "Shop Login" and a close button (X). Below the title bar, there are two text input fields. The first field is labeled "User ID" and contains the text "ashishsawant". The second field is labeled "Password" and contains masked characters "*****". Below the password field, there is a checkbox labeled "Hide Password" which is checked. At the bottom of the form, there are two buttons: "Login" and "Cancel".

CommandButton1

```
Private Sub CheckBox1_Click()  
    If CheckBox1.Value = True Then  
        TextBox2.PasswordChar = "*"   
    Else  
        TextBox2.PasswordChar = ""  
    End If  
End Sub
```

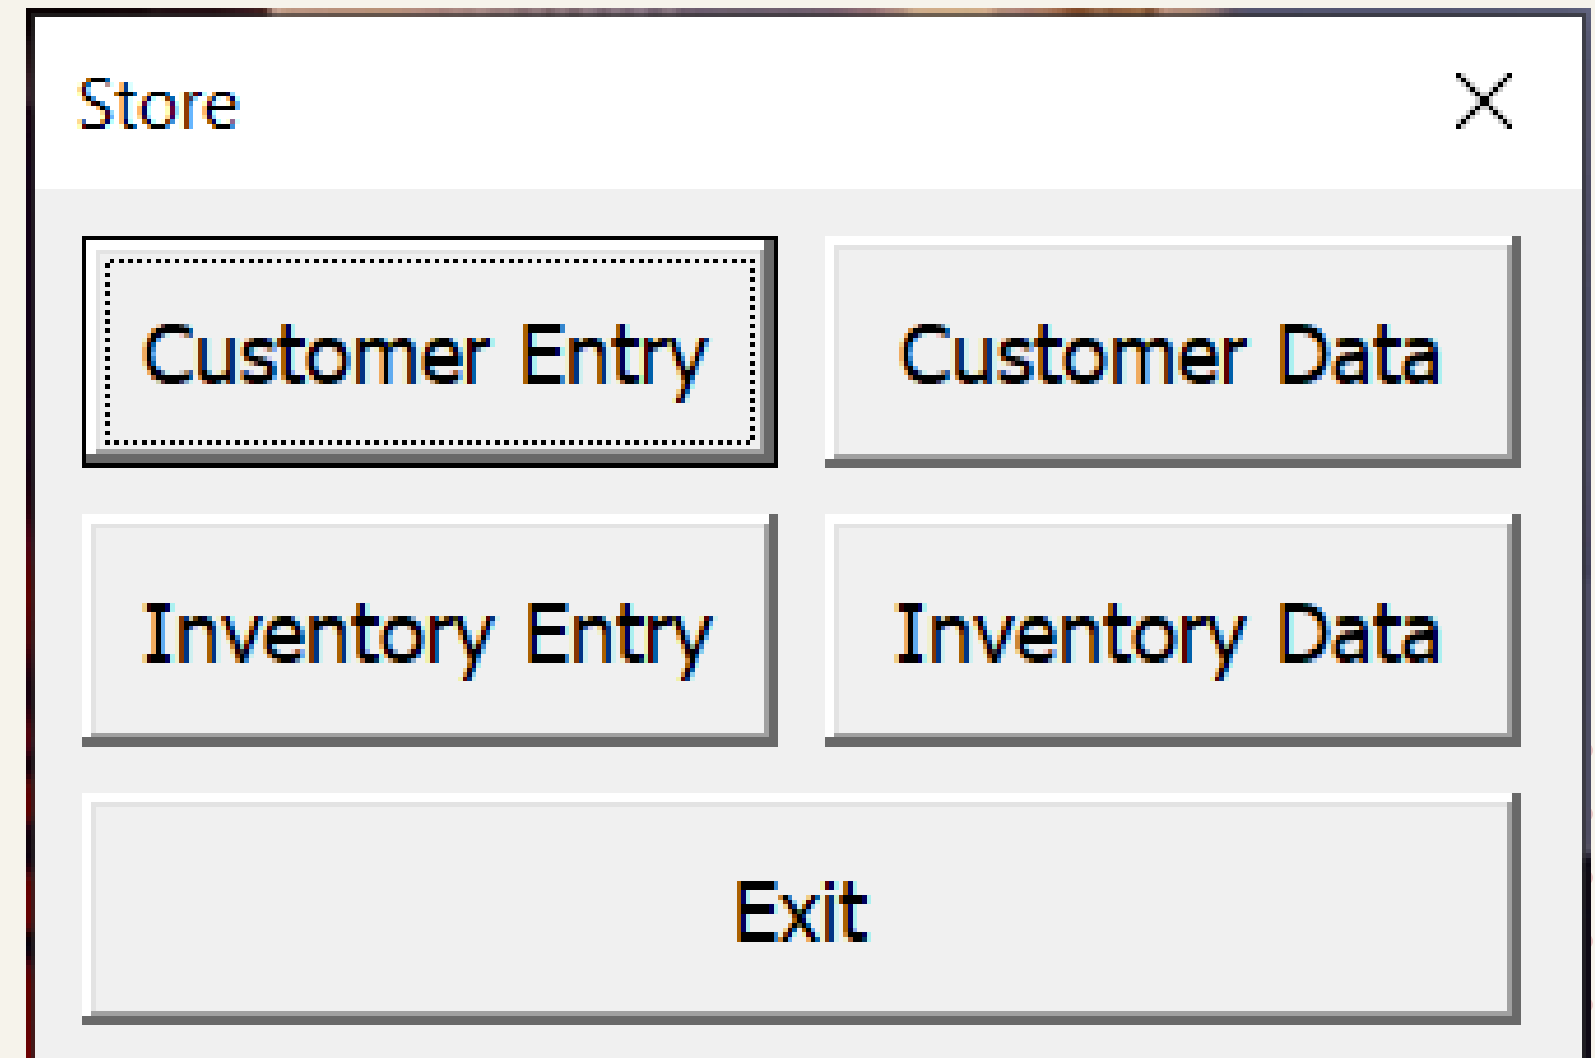

```
Private Sub CommandButton1_Click()  
If TextBox1.Text = "ashishsawant" And TextBox2.Text = "Ashish@123" Then  
Unload Me  
UserForm2.Show  
Else  
TextBox1.Text = ""  
TextBox2.Text = ""  
MsgBox "Wrong Password"  
End If  
End Sub
```

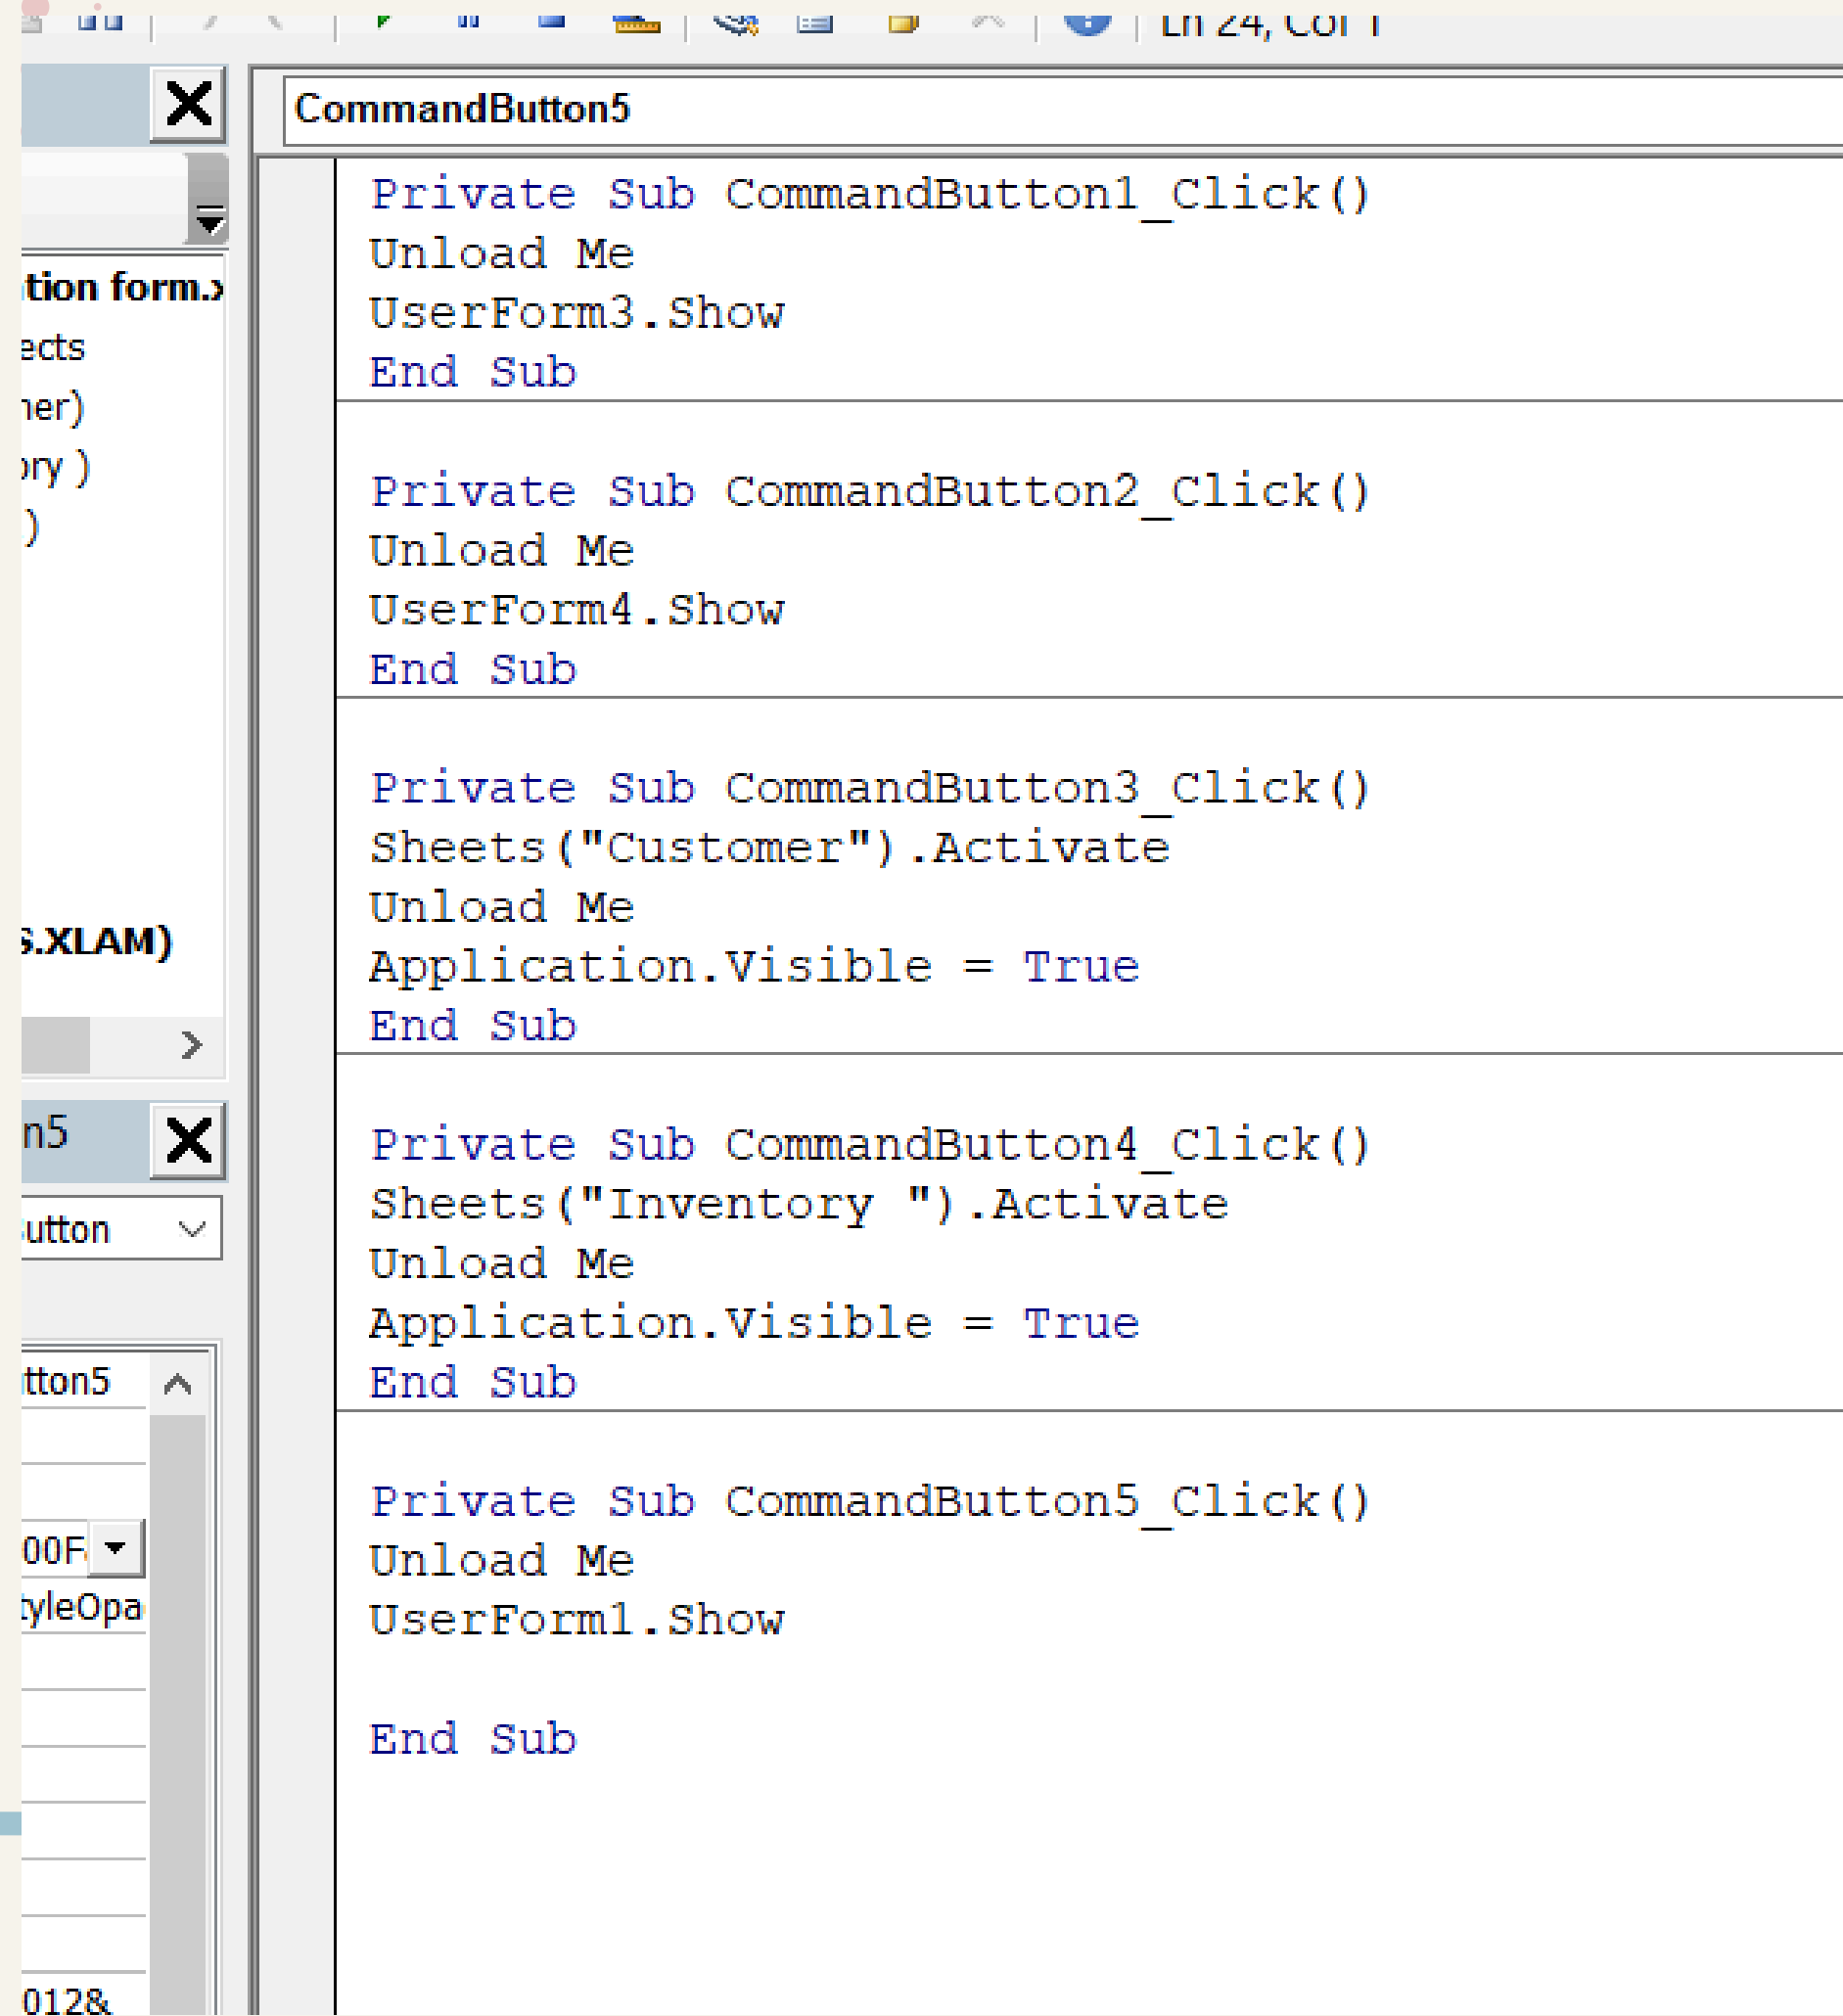

```
Private Sub Label3_Click()  
  
End Sub
```

```
Private Sub CommandButton2_Click()  
Unload Me  
End Sub
```

USERFORM 2: MAIN MENU

- UserForm 2 acts as the central hub of the application, offering a diverse range of functionalities through an intuitive menu interface.
- Users can conveniently navigate through various options such as customer entry, inventory management, and file selection.
- This versatility empowers users to tailor their experience according to their specific needs, fostering efficiency and flexibility.

USERFORM 3: CUSTOMER ENTRY

- **UserForm 3 revolutionizes the process of capturing customer data by providing a user-friendly interface with automatic calculation capabilities.**
- **Through carefully designed input fields and intuitive controls, users can effortlessly input customer information while the system handles calculations in real-time.**
- **This not only expedites data entry but also minimizes errors, ensuring data accuracy and reliability.**

USERFORM 4: INVENTORY ENTRY

- UserForm 4 simplifies inventory management by offering a streamlined interface for entering inventory data.
- Equipped with automatic calculation features, this userform empowers users to efficiently record inventory details while the system performs calculations seamlessly.
- By automating mundane tasks and providing instant feedback, UserForm 4 enhances productivity and accuracy in inventory management processes.
